

Figure 10 is a log-linear plot showing the error to phase target (cm) versus control cycle for various tasks. The y-axis is logarithmic, ranging from 10^{-2} to 10^1 cm. The x-axis is linear, ranging from 0 to 250 control cycles. The tasks and their corresponding colors are: approach (blue), descend (purple), settle (grey), close (dark grey), observe (light grey), lift (green), transport (orange), place (red), and hold (dark grey). The error generally decreases over time for all tasks, with 'approach' and 'descend' showing the fastest initial convergence.
